

Tanja Mueller

University of Strathclyde, Glasgow, Scotland

After working as a community pharmacist in Germany for several years, Tanja Mueller obtained an MPH from Lund University (Sweden) in 2014, and a PhD in Pharmacoepidemiology from the University of Strathclyde (Scotland) in 2017. Since October 2017, she has been employed as a researcher at the Strathclyde Institute of Pharmacy and Biomedical Sciences in Glasgow, where she is working on several research projects mostly with a focus on cancer and cardiovascular disease.

Tanja's research interest is, broadly speaking, rational use of medicines, mainly focusing on pharmacoepidemiology – particularly drug utilisation – but also comprising related areas such as health policy. While mostly working with large data sets, applying a range of statistical methods, she is also interested in mixed-methods approaches.

Sessions:

- W-ES 1: Basic statistical methods – presenting, visualising and interpreting drug utilisation data using descriptive statistical methods; Wednesday 04.03.2020, 14:30 – 15:30
- Early-career researcher event; Friday 06.03.2020, 12:30 – 13:30

Co-Chair:

- F-TS 7: Implementation of Interventions; Friday 06.03.2020, 09:00 – 10:30
